

Annual Drinking Water Quality Report

MURPHYSBORO
IL070500

Annual Water Quality Report for the period of January 1 to December 31, 2014

This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide safe drinking water.

The source of drinking water used by MURPHYSBORO is Purchased Surface Water

For more information regarding this report contact:

Name Tim Lee
Phone (618) 684-2961

Este informe contiene información muy importante sobre el agua que usted bebe. Tradúzcalo ó hable con alguien que lo entienda bien.

- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials used in associated with service lines and home plumbing. We cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Source of Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pickup substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.

Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials used in associated with service lines and home plumbing. We cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Source Water Information

Source Water Name	Type of Water	Report Status	Location
CC 01 - MURPHYSBORO MASTER METER	FF 110775100 TP02	<u>Current</u>	AT 1.0 MG GRD STORAGE TANK, 0.1 miles north of the intersection of Illinois Ave. & State Mill Rd.
CC 02 - MURPHYSBORO MASTER METER	FF 110775100 TP02	<u>Current</u>	Intersection of Bear Street and Williams Street
CC 03 - MURPHYSBORO MASTER METER	FF 110775100 TP02	<u>Current</u>	Northeast of the intersection of 16th Street and High School Street, at the High School
CC 04 - MURPHYSBORO MASTER METER	FF 110775100 TP02	<u>Current</u>	Southeast of the intersection of 7th Street and Suburban Drive
CC 05 - MURPHYSBORO MASTER METER	FF 110775100 TP02	<u>Current</u>	North of the intersection of Highway 13 and Sounth Hospital Drive, at St. Joseph's Hospital

Source Water Assessment

We want our valued customers to be informed about their water quality. If you would like to learn more, please feel welcome to attend any of our regularly scheduled meetings. The source water assessment for our supply has been completed by the Illinois EPA. If you would like a copy of this information, please stop by City Hall or call our water operator at **(618) 684-2961** to view a summary version of the completed Source Water Assessments, including: Importance of Source Water; Susceptibility to Contamination Determination; and documentation/recommendation of Source Water Protection Efforts, you may access the Illinois EPA website at <http://www.epa.state.il.us/cgi-bin/wp/swap-fact-sheets.pl>.

Illinois EPA considers all surface water sources of public water supply to susceptible to potential pollution problems. Hence the reason for mandatory treatment of all public water supplies in Illinois. Mandatory treatment includes coagulation, sedimentation, filtration and disinfection. Primary sources of pollution in Illinois lakes can include agricultural runoff, land disposal (septic systems) and shoreline erosion.

Lead and Copper

Definitions:

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.

Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90th Percentile	# Sites Over AL	Units	Violation	Likely Source of Contamination
Copper	2014	1.3	1.3	0.12	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.
Lead	2014	0	15	2.8	0	ppb	N	Corrosion of household plumbing systems; Erosion of natural deposits.

Water Quality Test Results

Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum residual disinfectant level goal or MRDUG: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDUGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Maximum residual disinfectant level or NRDL: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

The following tables contain scientific terms and measures, some of which may require explanation.

micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water.

ppb: not applicable.

na: Regulatory compliance with some MCLs are based on running annual average of monthly samples.

Avg: milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.

ppm:

Regulated Contaminants

Disinfectants and Disinfection By-Products	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Chloramines	12/31/2014	2.1	2 - 2.2	MRDLG = 4	MRDL = 4	ppm	N	Water additive used to control microbes.
Haloacetic Acids (HAA5) *	2014	37	5 - 50.5	No goal for the total	60	ppb	N	By-product of drinking water disinfection.
Total Trihalomethanes (TTHM)	2014	22	3.944 - 38.53	No goal for the total	80	ppb	N	By-product of drinking water disinfection.

Annual Drinking Water Quality Report

KINKAID AREA WATER SYSTEM

IL0775100

Annual Water Quality Report for the period of January 1 to December 31, 2014

This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide safe drinking water.

The source of drinking water used by KINKAID AREA WATER SYSTEM is Surface Water

Regulatory compliance with some MCLs are based on running annual average of monthly samples.

milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.

Regulated Contaminants		Collection Date		Highest Level Detected		Range of Levels Detected		MCLG	MCL	Units	Violation	Likely Source of Contamination
Disinfectants and Disinfection By-Products												
Chloramines	12/31/2014	3.1	2.4 - 3.7	NRDLG = 4	NRDL = 4	ppm	ppm	N	N	Water additive used to control microbes.		
Chlorite	2014	0.73	0.52 - 0.73	0.8	1	ppm	ppm	N	N	By-product of drinking water disinfection.		
Haloacetic Acids (HAA5)*	2014	20	15.6 - 51.7	No goal for the total	60	ppb	ppb	N	N	By-product of drinking water disinfection.		
Total Trihalomethanes (TTHM)	2014	19	9 - 45.4	No goal for the total	80	ppb	ppb	N	N	By-product of drinking water disinfection.		
Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination				
Fluoride	2014	0.9	0.92 - 0.92	4	4.0	ppm	ppm	N	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.		
Nitrate [measured as Nitrogen]	2014	0.03	0.03 - 0.03	10	10	ppm	ppm	N	N	Rundoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.		
Sodium	2014	8	8.3 - 8.3			ppm	ppm	N	N	Erosion from naturally occurring deposits: Used in water softener regeneration.		
Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination				
Combined Radium 226/228	07/14/2009	1.1	1.1 - 1.1	0	5	pCi/L	pCi/L	N	N	Erosion of natural deposits.		

Gross alpha excluding
radon and uranium

07/14/2009 0.75 0.75 - 0.75 0 15 pCi/L N Erosion of natural deposits.

Synthetic organic contaminants including pesticides and herbicides	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
2,4-D	2014	0.2	0 - 0.2	10	10	ppb	N	Runoff from herbicide used on row crops.

Atrazine	2014	1	0.4 - 2.2	3	3	ppb	N	Runoff from herbicide used on row crops.
Simazine	2014	0.26	0.18 - 0.26	4	4	ppb	N	Herbicide runoff.

Turbidity

	Limit (Treatment Technique)	Level Detected	Violation	Likely Source of Contamination
Highest single measurement	1 NTU	0.16 NTU	N	Soil runoff.
Lowest monthly % meeting limit	0.3 NTU	100%	N	Soil runoff.

Information Statement: Turbidity is a measurement of the cloudiness of the water caused by suspended particles. We monitor it because it is a good indicator of water quality and the effectiveness of our filtration system and disinfectants.

Total Organic Carbon

The percentage of Total Organic Carbon (TOC) removal was measured each month and the system met all TOC removal requirements set, unless a TOC violation is noted in the violations section.

Unregulated Contaminants

Substance	Year Sampled	Amount Detected (Average)	Range of Detections	Typical Source
Strontium	2013	70.829	67.0 to 79.3	Naturally-occurring element; historically, commercial use of strontium has been in the faceplate glass of cathode-ray tube televisions to block x-ray emissions.
Vanadium	2013	0.149	0.294 to 0.3	Naturally-occurring elemental metal; used as vanadium pentoxide which is a chemical intermediate and a catalyst.
Chlorate	2013	155.370	120.0 to 250.0	Disinfection by-product; and used in production of chlorine dioxide; agricultural defoliant or desiccant.
